Описание задачи

Калькулятор на Scala.

1. Ход работы

Текст программы
calculator.scala

```
package calculator
```

```
import  
util.parsing.combinator.JavaTokenParsers
```

```
abstract class Expr
```

```
case class Val(value : Double) extends  
Expr
```

```
case class UnOp(operator : String, operand : Expr) extends  
Expr
```

```
case class BiOp(operator : String, lhs : Expr, rhs : Expr) extends  
Expr
```

```
object Calculator {
```

```

3. Вывод

В результате выполнения работы я улучшил свои навыки программирования на языке Scala.
